Reducing Risk – Improving Safety

Adairsville, GA – May 20, 2008 – While danger exists everywhere, Eagle Solutions makes a constant practice of providing customers with freedom from risk by manufacturing equipment with features that can prevent injury, danger or loss. We are pleased to announce the release of a new line of UHS (Ultra High Speed) propane burnishers and floor stripper, SafetyPro. These machines are offered in a variety of widths and feature all of the latest in safety gear.

Operator safety is of prime importance to Eagle Solutions. Some of the features in the **SafetyPro** line include:

- Electric Clutch, which stops the pad from spinning when the handle is released
- Emissions Monitor evaluates the engine performance and will alert the operator to abnormalities, even shutting down the engine if emissions rise.
- 3-Way catalytic muffler lowers CO, HC and NOx emissions.

These features and more are standard on this line.

When it comes to operator safety, Eagle's goal is to create the ultimate safety machine with the best results. No other machines on the market provide the security from risk as the SafetyPro line from Eagle Solutions. Regardless of how many safety features are built into any machine, it is imperative that the operator read all instructions, be properly trained in machine use and never neglect maintenance. Eagle Solutions offers **FREE** Propane Operator Certification training at their facility in NW Georgia and throughout the country to encourage proper operation and maintenance. Safety is our goal in achieving "Better Results, Period."
